

Instructions for installing H8000FW driver on macOS Catalina

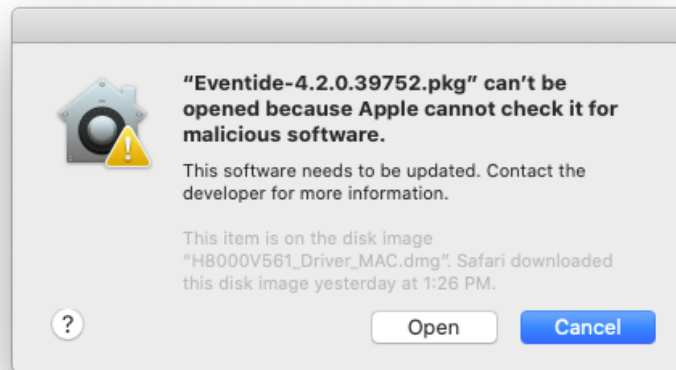

1. Download the H8000FW driver from eventideaudio.com
2. Run the Eventide_*.pkg installer package. A window will pop up saying that the installer can't be opened "because Apple cannot check it for malicious software."

3. Open System Preferences and navigate to the Security & Privacy section. Next to the notice about the installer package that was blocked, click the "Open Anyway" button.

4. A window will open with the same message about checking for malicious software, but this time there will be an “Open” button. Click the open button and proceed with the installation process.

5. During installation, a similar message may appear about “TC Applied Technologies”. Follow the same procedure in the Security & Privacy settings to allow it to run.
